First Coast	31121	2	NE Florida (BM)
Handi-Hams	31990	2	Handi-Hams (BM) <a href="http://handiham.org">http://handiham.org</a>
Net31001	31001	2	Scheduled Nets (BM)
Net31002	31002	2	Scheduled Nets (BM)
PRN2	7762	2	<a href="https://ncprn.net">https://ncprn.net</a> This is Local2 (TG2/TS2) on PRN Network
TN Ten	314710	2	Tennessee Ten (BM) (this is where W2XAB hangs out)

TG = Talkgroup

TS = Time Slot

Talkgroups (and User ID's) are configured in the Digital Contacts section. The example above is from the TYT MD-380 software. The Contact Name can be anything that you want. Typically, you would want to keep this short since it will be displayed on your radio.

The Call ID is the talkgroup number. I'm going to use LOCAL 2 as an example in the next graphic below.

The screenshot shows a software window titled "Channels Information" with two main panels: "Digital/Analog Data" and "Digital Data".

**Digital/Analog Data:**

- Channel Mode: Digital
- Channel Name: LOCAL2
- Band Width: 12.5kHz
- RX Frequency(MHz): 443.13750
- Scan List: TALLSCAN 1
- TX Frequency(MHz): 448.13750
- Squelch: Normal
- Admit Criteria: Color Code
- RX Ref Frequency: Low
- Auto Scan:
- TX Ref Frequency: Low
- Rx Only:
- TOT[s]: 60
- Lone Worker:
- TOT Rekey Delay[s]: 0
- VOX:
- Power: High
- Allow Talkaround:

**Digital Data:**

- Private Call Confirmed:
- Emergency Alarm Ack:
- Data Call Confirmed:
- Compressed UDP Data Header:
- Emergency System: None
- Contact Name: LOCAL 2
- Group List: NX4DN TS2
- Color Code: 1
- Repeater Slot: 2
- Privacy: None
- Privacy No.: 1

Above is an example of configuring a channel. Since we are configuring a LOCAL 2 channel, in the Channel Name above we called this channel LOCAL2. The Contact Name on the right that is selected from the drop down list is LOCAL 2. The Time Slot (called Repeater Slot in this software) is 2. Color Code on the NX4DN repeater system (Tallahassee, Greensboro, Waccissa) is always 1.
